

Job Title: Sr .NET Developers

Positions exist in Host Analytics Product Development Group for Microsoft .NET Developers who have passion for technologies and developing cutting edge applications, paying close attention to architecture and design, quality and performance.

Experience:

- Minimum of 5+ years of experience in progressively challenging technical roles in analyzing, designing, developing, and delivering n-tier Web-based applications
- Multiple positions exist for candidates with varying work experience levels and skill profiles

Educational Qualification:

- Bachelors or Masters Degree in Computer Science or allied discipline

Must have skills:

- Strong programming experience using Microsoft .NET technologies ASP.NET, VB.NET, C#, XML, HTML and AJAX using Visual Studio .NET (2008) and SQL Server 2005/2008 technologies.
- Development of N-tier applications with distributed application deployment
- Strong knowledge of and experience in OOP/OOAD and Design patterns
- Experience with ASP.NET MVC
- Experience in development of Web Services and Services Oriented Architecture (SOA)
- Experience in Agile development environments including conducting code reviews, code refactoring, code optimization and pair programming
- Ability to document the technical requirements.

Good to have skills:

- Knowledge on Enterprise Library, Multi threading and caching data in load balanced application environments
- Performance optimization of web applications across layers
- Programming experience with Microsoft Office products
- Scripting languages (JavaScript, VBScript)
- Prior experience in "software product development" organization is a strong plus
- Knowledge of UI Libraries such as - jQuery, ExtJS and/or DHTMLX is a strong plus.
- Knowledge of Microsoft Team Foundation Server 2008

Traits

- Excellent communication skills
- Industry certifications and/or participation in technology forums is a huge plus
- Must be able to see tasks through completion without significant guidance.
